CLINICAL RESEARCH CONSULTANCY

Methodology,
statistics and evidence
for clinical research

Quantum Care is an independent consultancy supporting clinical research: study design and biostatistics, evidence synthesis and guideline methodology, and research tools that automate the repetitive parts of the work.

WHAT WE DO

Our services

METHODOLOGY & BIOSTATISTICS

Clinical research methodology

From research question to defensible result.

Study design, sample size and simulation, statistical analysis plans, analysis and reporting – for trials, observational studies, registries and real-world evidence.

• Study design and protocol development

• Sample size, power and simulation

• Statistical analysis plans

• Statistical analysis and reporting

Learn more

EVIDENCE-BASED MEDICINE

Evidence synthesis and guidelines

Evidence, synthesised rigorously – and faster.

Study design, sample size and simulation, statistical analysis plans, analysis and reporting – for trials, observational studies, registries and real-world evidence.

• Study design and protocol development

• Sample size, power and simulation

• Statistical analysis plans

• Statistical analysis and reporting

RESEARCH & TOOLS

Research and tools

We build what we wish existed.

Study design, sample size and simulation, statistical analysis plans, analysis and reporting – for trials, observational studies, registries and real-world evidence.

HOW WE WORK

Principles we do not negotiate on

Pre-specified and transparent

Protocols, analysis plans and review protocols are written and, where appropriate, registered before the work starts. We report to the relevant guideline (CONSORT, STROBE, PRISMA, TRIPOD+AI, ACCORD) every time.

Honest about uncertainty

We say what the data can and cannot support. A sample-size memo that flags a fragile assumption is worth more than one that hides it.

Reproducible by default

Every analysis ships as version-controlled code with a data dictionary. You – or a reviewer – can re-run it and get the same numbers.

Data protection built in

Patient data stays within the client's infrastructure and under a data-processing agreement. Our public tools use synthetic data and run in the browser.

Automation with a human in charge

We use large language models to remove drudgery, never to replace judgement. Every automated step is validated against human work, disclosed and auditable.

Independent

We have no stake in the result. Our only deliverable is a method that holds.

RESEARCH & TOOLS

What we are building

Active

TrialScope

A protocol-feasibility simulator for clinical-research teams.

Apply a study's eligibility criteria to a synthetic cohort one criterion at a time and see exactly where the candidate population goes – before recruitment begins. Built to show why criterion-by-criterion reasoning misleads, and to make feasibility discussions concrete.
